## **DETAILED ACTION**

### ***Drawings***

1. Figure 1 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

### ***Claim Objections***

2. Claims 4, 17-20 are objected to because of the following informalities:  
Appropriate correction is required.

Regarding claim 4, line 2, the term "lengthdriven" should be changed to--length driven--.

Claims 17-20 should depend on claim 16 instead of claim 1.

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States

Art Unit: 2611

only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claims 1-3, 7-9, 16, 21 are rejected under 35 U.S.C. 102(e) as being anticipated by Isakksson et al (U.S. Pat. 6,865,232).

Regarding claim 1, Isakksson et al disclose a process for configuring a symmetric xDSL-type modem, comprising: detecting a predetermined criterion corresponding to an asymmetric operating mode, in particular an ADSL-type, such criterion including the estimate of length of a line; and in response to the detection, disabling a number of carriers in order to establish the asymmetric operating mode (col. 10, lines 4-22, wherein the cable length for MUSIC can be successfully limited to 1300 meters).

Regarding claim 2, Isakksson et al disclose wherein it is applied to a VDSL-type modem operating with up to 4096 carriers being reconfigurable in ADSL mode with a number of carriers reduced to 256. In order to meet criterion of the ADSL mode, it is inherent that the carriers of the VDSL-type mode (or transmission) should be reduced to 256 carriers.

Regarding claim 3, Isakksson et al disclose wherein the criterion further includes the measurement of the signal to noise ratio (col. 2, lines 19-28).

Claims 7-9 are similar to claims 1-3. Therefore, claims 7-9 are rejected under a similar rationale.

Claim 16 is similar to claim 1. Therefore, claim 16 is rejected under a similar rationale.

Art Unit: 2611

Claim 21 is similar to claim 1. Therefore, claim 21 is rejected under a similar rationale.

***Allowable Subject Matter***

5. Claims 4-6, 10-15, 17-20, 22-28 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

***Conclusion***

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Palm (US 2002/0041572 A1) discloses handshaking communication system for multiple xDSL.

Vitenberg (US 2003/0051060 A1) discloses multipoint digital subscriber lines with home data network ability.
